GU Food Action Team Mission
To develop a thriving local food system by serving as a catalyst, advocate and communication hub for local food initiatives.

The Local Food team brings together local farmers, distributors, processors, farmers markets, cooperatives, community gardeners, community supported agriculture organizations, health professionals, restaurants, extension services, educational organizations and government entities in the Cincinnati Metropolitan Area to work collaboratively.

Guiding Principles of the GU Food Action Team

1) All Greater Cincinnati residents should have access to affordable, local, healthy, sustainable, food.
2) Our work focuses on food grown in Ohio, Indiana and Kentucky, with a priority for foods grown in our region.
3) Intentional coordinated efforts in advocacy, public education, and awareness are needed to build a stronger local food system.
4) It should be easy to grow food in our region, for personal use or for business purposes.
5) Businesses that produce, process, distribute, and sell local and healthy food should grow and thrive in Greater Cincinnati.
6) Food growing, production, and distribution practices should be humane and ethical.
7) Food production and distribution should adhere to sustainable growing practices that result in improvement of the quality of the local environment.
8) A thriving local food system requires strong collaboration among all stakeholders in the food system.
9) Progress toward goals should be measured.
10) Food related waste should be prevented, reused, or recycled.

GU Food Action Team Vision

Thanks to GU’s efforts to promote collaboration and local food initiatives, by 2020, the Greater Cincinnati region will have a thriving local food system that addresses the needs of consumers, producers, distributors, and other food system stakeholders.

More specifically,
● A cultural shift will have occurred in our region that focuses on healthy living and eating.
● The benefits of buying local foods will be widely understood.
● Local foods will be widely available, accessible to all of our region’s residents.
● Local governmental and private sectors will support and promote a strong local food system.
● There will be numerous garden plots at churches, businesses, government properties, and other community properties where space allows.
● Our citizens will have an increased level of self-sufficiency as a result of access to local foods.
● Our region will be less susceptible to food security threats through re-establishing closer consumer-producer connections.
● There will be career opportunities that pay living wage employment in all aspects of the food system.
● Local universities will offer opportunities for education and certification in local food related fields.
● Our local food system will be recognized regionally and nationally, and looked to as a model for replication.
● At least 10% of food dollars of individuals, corporations, and institutions in our region will be used to support local food producers and related businesses

Unique Niche

Green Umbrella is the “backbone organization” that helps all member organizations work better together to promote a more environmentally sustainable region.

Green Umbrella partners with our area’s leading planning initiatives, Vision 2015 in Northern Kentucky and Agenda 360 in Southwestern Ohio, to facilitate collaboration among over 200 non-profits, businesses, educational institutions and governmental entities focused on the environmental aspects of sustainability. We have united around the Collective Impact Model, which has produced remarkable results for the STRIVE Partnership, the collaborative that promotes innovation in our local education system. The model teaches that success requires having a common agenda, using a shared measurement system, supporting mutually reinforcing activities and maintaining continuous communication.

The infrastructure of GU provides easy access to “early adopters,” both organizations and individuals, who are interested in promoting consumption of locally produced fruit and vegetables.

Assumptions for 2016-2018

1. Local food tends to cost more than mainstream food because
   a. demand for local foods exceeds current supply, and

GU Food System Strategic Plan
b. A lack of distribution and aggregation infrastructure reduces efficiencies and cost savings.

2. For the local food movement to reach its full potential, the price gap between local and mainstream food will have to shrink and distribution will need to increase.

3. People tend to value locally produced foods over globally produced food.

4. Local food distribution offers opportunities for reducing the cost of every component of distribution including transportation, refrigeration, packaging, advertising, insurance and middle people.

5. Food distributors will respond to increased demand in local foods.

6. Technical assistance for competition strategies will help local food businesses better compete with global food distributors, for example, use of social media and mobile technologies, etc.

7. “Network communities of practice” (joint procurement cooperatives for ex.) help locally owned businesses compete with large food distributors.

8. Shorter food supply lines and community self-reliance that come with local food can reduce food security risks.

9. Private/public partnerships are needed to address food insecurity in low-income communities.

10. Collaboration will affect changes in public policy, thus driving systemic change in the local food system.

11. The timing is right for local food initiatives since public awareness of the need for healthy food choices and sustainable environment initiatives is increasing dramatically.

12. Economic benefits for the local community must be emphasized in the case for local foods.

**Strategic Intent:**
Green Umbrella will lead a collaborative effort working with local stakeholders to serve as a catalyst and coordinator for a thriving local food system.

**BHAG (Big, hairy audacious Goal):**
To double the percentage of consumption and production of locally sourced fruit and vegetables by 2020.
Key Result Areas:
Green Umbrella’s (GU) local food advocacy efforts will target results in Infrastructure Development, Education, Access, and Policy.

Infrastructure Development for Local Food Initiatives:
GU will be the backbone organization and recognized leader for collaborative initiatives to promote local food, production, distribution, recovery policy and consumption. GU will facilitate communication, collaboration and data collection among individuals, communities, producers, distributors and policy makers to support a sustainable food system. GU will provide a forum and infrastructure for sharing best practices and information, helping to reduce barriers, and brokering partnerships. GU will be actively involved in developing and implementing a Strategic Plan for the local food system along with other local food stakeholders. A full time “Local Food System Advocate” will coordinate GU’s initiatives, working closely with the GU Food Action Team. The Food Action leadership team will serve as the advisory team. GU will work with local food advocacy groups in neighboring regions in Ohio, Kentucky and Indiana.

Education About Local Foods:
People in Greater Cincinnati will have food literacy skills. They will have a good sense of where their food comes from, where to buy local foods, how to plan meals, and how to prepare and properly store fresh fruit and vegetables. They will know where to go for information about preserving food and other topics related to local foods. Consumer demand for local produce will increase due to education efforts from Green Umbrella and other stakeholders in the local food system. Farmers and local food related businesses will better understand opportunities for growth in producing and distributing local foods including tax incentives for donations.

Access to Locally Produced Foods:
All people in the Greater Cincinnati region will have convenient access to healthful, affordable, local and sustainably grown food. Local foods will be readily available to individual consumers, in their homes, their workplaces, in schools, and other community places. In addition to farmers markets and stands, mainstream retailers will offer locally grown food. The number of certified food producers will have increased. Funding and policy mechanisms that support increased local food production will be in place.

Policies that Support the Local Food System:
A regional Food Policy Council will have been established with a sustainable infrastructure. The Council will be actively executing a prioritized action plan. Agenda 360, Vision 2015, and other regional plans will incorporate local food initiatives. Local Institutions such as schools, city departments, and community and civic organizations will incorporate policies for healthy local food. Decision makers in government, business, and community
organizations will support efforts to build more complete and sustainable local food production, distribution, recovery, and recycling systems. There will be public and private land designated for community or institutional gardens.

**Bold Initiatives**

1. **Develop a robust Local Food System Infrastructure**
2. **Promote Healthy Food Consumption and Access**
3. **Develop and implement financial support strategies to sustain local food initiatives.**
4. **Strengthen Local Food Distribution, Recovery, and Recycling Infrastructures**
5. **Provide Technical Assistance and Expertise for Local Food Producers**
